

React-Native App Template

A mobile application built using react-native.

OR

A Figma file converted into a working react-native application screen. (Considering your application is setup with react-native installed and emulator and gradles sync)

Setup Instructions

1. Install Dependencies.

Clone the example app repo

```
git clone https://github.com/UrvaSurti/FigmaToRN-FriendScreen.git
```

```
cd TestProject
```

Install npm dependencies

```
npm install
```

2. Start Metro

#open a new terminal

Note you have to inside react-native project (ie cd TestProject)

code . (Optional if you want to navigate your screen to open the project in vscode)

```
npx react-native start
```

3. Run the project on Emulator

You can run this in the terminal inside vscode note have to be inside react project.

```
npm run android
```
